

E62 executable Python factors — same-seed verified-transform mechanism pilot
status=pass; control step=384/384; E62 step=384/384; verified transform discoveries=439

● E60 mechanism control, seed 9011 ◆ E62-R9 validator-preserving transform, seed 9011

A model-generated verified outcome is transformed by a validator-preserving task rule and independently revalidated; training never sees gold support, a desired mode count, desired entropy, or evaluation feedback. Transform rows sent to PPO: exactly zero.
