

Clean 0.5B campaign — selected current cohorts and full status

compute-matched Dr.GRPO
online verified MaxEnt
thick = available-seed mean; band = range

Online verified MaxEnt vs compute-matched Dr.GRPO · 12 passes · readable square panels

Original estimator: 80/80 audited terminal · Repairs excluded · Pantry 10/10 · Point v6 10/10 launched · Ant v18 failed → v18 fail · 2026-07-30 21:25 UTC

AntMaze harder-task

Secondary stable-handoff v18 con

STABLE-HANDOFF V18 GATE FAILED

v17 and v18 are retained as negative controller results

ConstructiveCode

Requested semantic domain · qua

CONSTRUCTIVECODE STOPPED BEFORE FINAL CELLS

0/10 paper jobs: executable gate passed, but the 0.5B, train-only-SFT, and registered 1.5B capacity gates failed

Clean 0.5B campaign — controller diagnostics

Five-domain outcome view — terminal E68 context and live E69 Gate 2

matched Dr.GRPO, 3-seed mean
E66 MathIR causal control, 3-seed mean
live E69 Gate2 Dr.GRPO, seed 43
historical E58, 3-seed mean
terminal E68 MathIR, 3-seed mean
live E69 Gate2 route successor, seed 43

accepted repair chain R1 Graph → R2 Python → R3 MATH | Gate-2 terminal 18/18 | MATH-dev 2304/2304 and 2304/2304 | temporal route pairs C=39, M=50, G=0, P=30

Four frozen outcome metrics only. E66/E68 appear only for the terminal MathIR causal result. Superseded Graph/Python attempts and controller telemetry are omitted; MATH-500 remains sealed.
