

Clean eight-environment 0.5B replacement campaign — historical E68 format
Four frozen outcome/discovery panels; 5 seeds × 12 passes; PointMaze geometry shift is a labeled replacement configuration
Stage A: 40/40 terminal, 40 metric-bearing, 40 materialized; 80/80 audited terminal overall
80/80 paper jobs submitted; remaining rows stay fail-closed; no historical values or carry-forward (2026-07-31 01:43 UTC)

● compute-matched Dr.GRPO — available-seed mean; band = available-seed range - - - seed 44 - - - seed 46
◆ online verified MaxEnt (E58 recipe) — seed 43 - - - seed 45 - - - seed 47

PointMaze geometry shift (replacement configuration)

PantryPlan

PointMaze

AntMaze

Thin lines are exact E70 seed trajectories. Thick lines average only the seeds actually present at each x-coordinate, with n annotated;
this is a live progress view, not a terminal five-seed estimate. Quality uses the frozen multi-answer evaluation split;
cumulative discoveries use the registered online verified-support telemetry. PantryPlan, PointMaze, AntMaze, and PointMaze geometry shift show
their newest identity-bound gate or Stage-B state; maze terminal counts remain zero until executable replay audit passes.
ConstructiveCode remains a reported negative qualification (0/192 accepted at both 0.5B post-SFT and 1.5B) and is not counted in this roster.
