

Reported five-domain 0.5B surface — four frozen outcome/discovery panels, 5 seeds $\times$ 12 passes
 Stage A: 40/40 terminal, 40 metric-bearing, 40 materialized; no historical values and no carry-forward (2026-09-04 15:42 UTC)

— compute-matched Dr.GRPO — online verified MaxEnt (E58 recipe) — available-seed mean; band = available-seed range — individual seeds (43-47)

Thin lines are exact E70 seed trajectories; thick lines average the seeds present at each x-coordinate, with n annotated. Quality uses the frozen multi-answer evaluation split; cumulative discoveries use the registered online verified-support telemetry. The maze environments and ConstructiveCode never reached an admitted cohort and are excluded from this surface rather than shown as empty rows.
