

E62 executable Python factors — same-seed open-set proposal mechanism pilot
status=in_progress; control step=120/384; E62 step=118/384; verified proposal discoveries=1

● E60 mechanism control, seed 9011 ◆ E62-R7 original-prompt temperature sweep, seed 9011

A model-generated verified outcome only triggers an untouched-prompt temperature sweep; training never sees gold support, a desired mode count, desired entropy, or evaluation feedback. Proposal rows sent to PPO: exactly zero.
